

Sophisticated electronics are integrated into the system to control the operation, and incorporate a built-in remote control function. Alternatively, there are inputs which can be utilised for activation by other switching devices.

A "Push & Go" feature allows the door to sense manual pressure on the door, and the control function will take over and automatically open the door.

For safety, the system has self-learning software. The system continually monitors the change in current of the motor, and if any obstruction occurs during the opening or closing sequences, the motor will react and adjust it's operation.

Digiway can be coupled with various access control devices, including keypads, card readers, radio transmitters, infra-red sensors, push buttons and microwave sensors. Digiway can be used to control the locking of the door, and can function in several modes:

Automatic Mode
Restricted Mode
Normal Mode

An external manual switch allows the user to select "walk", "blocked" and "stop" modes.

The system is wired into 240Vac single phase, but all functions are 12Vdc and includes a standby battery.

Digiway is a system developed to automate single action swing doors.

Designed to be installed on inward or outward hinged swing doors, the system is entirely reversible to suit right or left handed openings. Digiway is suitable to operate doors up to 1 meter in width and with a maximum weight of 100kg.

The mechanism is fixed to the frame above the door and comprises of a motor and gearbox assembly, with either a sliding or articulated operating arm.

The operating arms (sliding or articulated) have been designed to take account of the flexibility of some doors, and provide a smooth mechanism to transfer the torque effectively.

The compact drive assembly is integrated into an anodised aluminium housing, which is aesthetically pleasing and would suit any environment. The housing can be supplied powder-coated to any R.A.L. colour upon request.

It's attractive styling combined with robustness of the drive system makes Digiway suitable for either residential or commercial use.

Digiway meets all European Standards.

DigiWay - list of features:

- * Inward or outward door automation
- * RF synchronisation of double doors
- * Safety sensing (obstacle detection)
- * Stop, Go & Block signals
- * 13Vdc, 1A output for locking
- * Self-learning set up
- * Built-in battery standby
- * "Push & Go" option
- * Override - open or closed
- * RAL options for cover

Models:

- | | |
|-----------------|--------------------------------------|
| DWS102AT | Single Digiway with articulated arm |
| DWS102ST | Single Digiway with sliding arm |
| DWD102AT | Double Digiway with articulated arms |
| DWD102ST | Double Digiway with sliding arms |
