VIP

Door Entry Direct Bite Size Training

Mark Morton-Smith
Comelit Trainer

System Features & Functions

Additional Functions

As well as all of the standard intercom functions: Audio, Video Lock Release etc…
There are a range of additional functions. Some are device specific please check if required:

•Video Memory Function or answer machine. If a call is made and is not answered the internal monitor can record a 10 second Video and Audio clip

•Away Message. The internal device can be used to record a message , which if activated will play back out of the speaker in the entrance panel if a call is made to this address

•Intercommunication between Internal devices either at the same address, or different addresses. A directory can be programmed in to the menu allowing the user to select who to call

•Call Diversion. If a call isn't answered after a programmed time (or the device is busy) the call can be forwarded to anther device on the network

•Voice Annunciation & LED Indication at Entrance Panels. To help to comply with the equality act, Voice + LED indication is available to let the visitor know that a call has been placed, answered/busy, and if the door is being released

•Hearing Loop option available. All Video monitors have a built in hearing loop as standard to allow users with hearing aids to amplify the volume. If required a hearing loop module can be added to Entrance Panels

System Features & Functions

SIP Interface

- SIP stands for Session Initiation Protocol

- It is an IP protocol used for communication across a network

- Comelit VIP is also a protocol, and we require an interface to convert from VIP to SIP

- We normally use SIP in 1 of 2 ways.
-
- Calls to IP Phone systems
- Calls to 3rd party home automation systems
  - Crestron / RTI / Control 4 / Gira

System Features & Functions
Call Log NVR

- Allows the recording, storage and playback of calls from external units

- Possibility to install on a ViP system as a "Door Entry NVR"

- All calls and activity from the panels will be recorded on this NVR

- Any PC with Call Log Client SW can connect to Call Log NVR and upload data

- Video and audio recording

System Features & Functions
VIP – Fire Interface 1467

- 1467 interface allows to forward events generated by the Fire detection system to the VIP door entry system

- This is not part of the Fire alarm system – But an addition

- Requires Mini or Maxi Monitor

- Comelit Atena or Logifire Panels

- The 5 types of events reported on VIP devices are

  - Pre-alarm

  - Alarm

  - Evacuation

  - Fault - General fault from Fire control panel - **only to CPS**

 - Communication error - Connectivity problems with Fire control panel - **only to CPS**

System Features & Functions

Virtual Keys

App Feature
