

VRP and LCP range

Vandal resistant and laser cut panels from **bell system**

Model LCP7

Manufactured from 2.5mm 316 marine grade* stainless steel or optionally in solid brass the VRP panels are supplied for flush mounting with a zintec back-box or optionally for surface fitting with a stainless steel cowling.

The panel is fixed to its back-box with tamper proof bolts (a special ¼" hex bit is supplied).

For each push-button a number or letter can be engraved on the panel for permanent identification. The engraving of flat numbers is included in the price but any further engraving, e.g. building names or instructions will incur a modest surcharge.

Although we generally supply panels to fit standard back boxes, they can be manufactured to custom dimensions; prices for this can be obtained on application.

Custom layouts can include

- Custom engraving with numbers and text
- Trades facility
- Cut out for CCD camera
- Cut out for Proximity readers with stud fixings
- Keypads for access control

Model VRP6-WIN

Model VRP5-S
with extra engraving

LCP Laser Cut Panels

The LCP panel offers even greater protection than the VRP panels and will resist most attacks of vandalism. The front-plate consists of an overlapping bezel and a removable plate cut by a laser from the same sheet of 2.5mm 316 marine grade stainless steel. This leaves a gap of just 0.3mm rejecting implements that could be used to force the panel from its box. The bezel is permanently secured to the back-box providing an extremely strong fixing to the wall. The removable plate is fixed to the bezel and back box with countersunk A2 stainless steel security bolts requiring the use of a specialist tool for their removal (supplied).

Ordering information

Order a model VRP n or LCP n, where n is the number of push-buttons required. e.g. a four button unit would be a model VRP4. (Please include an extra push-button should a Tradesmen/Services button be required.) For surface panels add -S to the order code e.g. VRP4-S

*Despite using the highest quality of 316 marine grade stainless steel, panels can still be prone to tarnishing in some coastal locations or in areas of industrial pollution. If in doubt about the suitability of these panels in your area please contact us for advice.
