

4G GSM

Audio entry systems from **bell system**

These systems are designed to control access through doors or gates using a single call panel and the 4G mobile network. Visitors use the call panel at the entrance to ring a mobile or landline, converse and, if granted, gain access. A resident can also gain access by ringing the system with their programmed mobile number with or without a 6 digit security code.

These systems are ideal for remote access control especially for gates.

Some of the features include

- Your choice of SIM/network for optimum regional use. No data plan required.
- Improved signal strength with wall-mounted antenna
- 1-way to 8-way systems
- Up to 3 mobile or landline telephone numbers per call button
- Secure dial-in to converse and unlock the door/ gate from anywhere
- SMS Text message programming from anywhere
- Concierge call diversion
- Two door/ gate control eg. vehicle/ pedestrian gate or lobby doors
- Separate weather resistant IP65 control unit for increased security
- Marine grade stainless steel panels with illuminated call-buttons and indicator panel
