VIDEO DOOR ENTRY SYSTEMS

Trusted Quality
Easy to Install

2018 Catalogue

A fresh approach to audio and video door entry solutions

With a proven track record of providing robust and highly reliable door entry systems, and founded on the principles of manufacturing quality products that are designed to be easy to install and even easier to use, Aiphone has become one of the world's largest and trusted communication solutions brands.

- Robust, ultra reliable and easy to install
- Just two wires for audio and two wires for video
- All Aiphone kits are backed by a 3 Year Warranty as standard

GT Kits

The GT system is a flexible and easy to use video intercom system for small multi-tenant buildings to large private housing developments.

It has also proved to be popular with installers looking for a cost effective and aesthetically attractive solution for commercial buildings, education campuses and healthcare environments.

Supporting up to 500 video intercom stations, the GT system offers handset and hands-free communication with up to 4 security guard stations and 16 entry panels, which are equipped with 170 degree PTZ cameras to enable tenants to have clear visibility of visitors.

With a recently upgraded camera unit and new monitor stations that take advantage of the clearer picture, the GT is now available in a number of competitively priced kits, enabling you to match different types and number of stations to your individual project requirements.

Unlike competitors' products where the number of wired required increases depending on the number of door stations, **GT system only requires 2 wires** for audio and 2 wires for video, regardless of the number of stations.

Complete multi-way door entry kits

Aiphone door entry kits include all the components you need to install out of the box. Quote just one product code when you place your order.

1 WAY	DA-1AS
2 WAY	KITDA2
3 WAY	KITDA3
4 WAY	KITDA4

Generic GT Video System Wiring Example

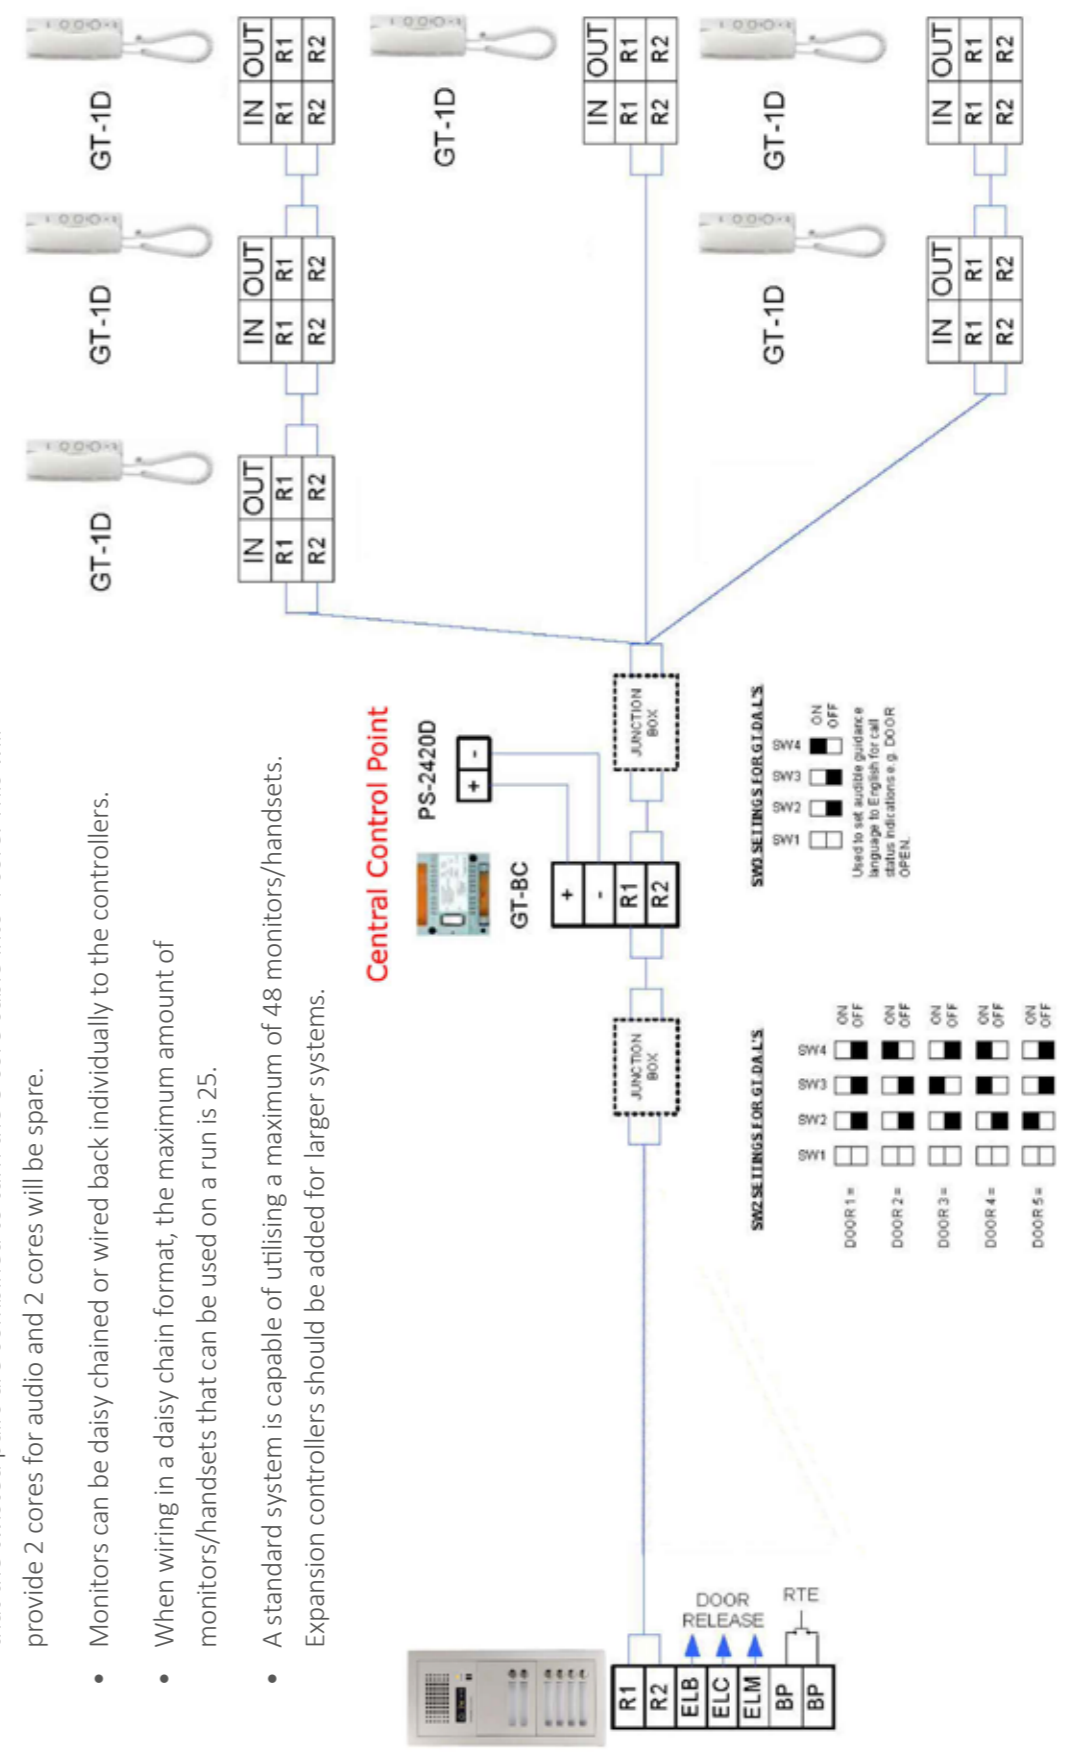

- Aiphone UK recommends CAT5E should be used throughout the entire system and that the twisted pairs are combined to turn the 8 core cable into 4 core. This will provide 2 cores for audio and 2 cores for the video signal.
- Monitors can be daisy chained or wired back individually to the controllers.
- When wiring in a daisy chain format, the maximum amount of monitors/handsets that can be used on a run is 25.
- A standard system is capable of utilising a maximum of 48 monitors/handsets. Expansion controllers should be added for larger systems.

Generic GT Audio System Wiring Example

- Aiphone UK recommends CAT5E should be used throughout the entire system and that the twisted pairs are combined to turn the 8 core cable into 4 core. This will provide 2 cores for audio and 2 cores will be spare.
- Monitors can be daisy chained or wired back individually to the controllers.
- When wiring in a daisy chain format, the maximum amount of monitors/handsets that can be used on a run is 25.
- A standard system is capable of utilising a maximum of 48 monitors/handsets. Expansion controllers should be added for larger systems.

PLEASE NOTE A MAXIMUM OF 25 GT INTERCOMS PER CABLE RUN

Life has just got easier
