

HOW TO ANSWER A VIDEO ENTRY CALL WITHOUT EVEN GETTING UP FROM YOUR SOFA

XIP Mobile is the new BPT App developed for iPhone®, iPad®, Smartphones and Android Tablets™ which allows you to manage direct on your mobile device audio/video calls from units of the XIP digital video entry system. You just need to be inside your home. With XIP Mobile you can receive a call from the entry panel or from the building porter but you can also communicate with other mobile devices or with BPT receivers connected to the same system. In addition, with a simple touch, you can activate door opening or other functions through the auxiliary commands. All without even getting up from your sofa. Life is easy, isn't it?

GRAPHIC INTERFACE

MANAGING FAVOURITES LIST **DIVIDED BY TYPE (USERS and ENTRY PANELS)**

You can create your own address book of favourite users and entry panels, simply selecting the contact and pressing the "star" icon for iOS or pressing and holding the contact for Android™.

CALL LOG

The log is divided into 4 sections: a list of all calls, received calls, dialled calls and missed calls. For each item, the caller or the recipient and the date and time of the call are shown.

Presents a list of all contacts reachable by the user whether they are mobile devices, analog receivers, porters or entry panels. Using the search bar "Filter contacts", you can narrow down the list displayed.

Allows you to enter a short call code to call direct other devices in

ACTIVATION AND CONFIGURATION

To enable operation, the mobile device to which you downloaded the XIP Mobile App must be registered on the ETI/SER XIP system server via the LIC/APP user license. Setting up the SIP Account (unique identification generated during system setting) directly in the App settings, the mobile device is registered on the server before loading the contact list and the relevant part of the system and can then function correctly.

MAIN FUNCTIONS

MAKING A CALL

A call can be made by selecting the contact you want to call from the contact list or from the favourites lists and pressing the call button.

You can call two or more devices simultaneously that belong to the same housing unit that can be mixed, i.e. inside it can have both mobile and analog X1 receivers. Naturally calls to single devices are possible.

MANAGING AN INCOMING CALL WITH CALLER PREVIEW

The video preview of a call from an entry panel or a porter, with the use of a webcam, can be viewed on the device display. The user can respond by activating the audio to the caller or refusing the call. The video of the recipient can be seen by the caller (whether from a mobile device or a porter) but you can also block it by pressing on the appropriate icon if you wish.

SELF-CONNECTION OF AN ENTRY PANEL

From the list of inputs you can choose the entry panel to self-connect and press the call button to display the images. Pressing on the appropriate icon, you can display in cyclic sequence the images of the entry panels in the list.

The following operations can be performed with a call in progress:

- door opening
- auxiliary commands (up to 10 aux)
- activating audio to the entry panel

During any call, additional advanced functions are also possible*:

- suspending communication (pause)
- muting the outgoing audio (mute)
- disabling the outgoing video
- changing camera from front to rear
- * These functions may or may not be present depending on the calling device type.

VIDEO ENTRY CALLS DIRECT ON SMARTPHONES AND TABLETS. INNOVATIVE TECHNOLOGY, EASY LIFE!

COMPATIBILITY

SMARTPHONE / ANDROID TABLET™	iPhone°/iPad°
version 2.3.3 or higher	version iOS 4.3 or higher
display: 800 x 480 pixels or more	
CPU clock frequency: 1 GHz or higher	
architecture: ARM v7 with NEON support
