

MiniTouch

Versatile by nature

THE DOMOTICS SUPERVISOR
Small size, big performance.

Alarm

Temperature

Loads

Shutters

Lights management

Irrigation

Automations

Mini-Touch is the result of an engineering and design project developed entirely in Italy. Ultraflat, touch screen, hi-tech material, super-gloss finish: futuristic technology whose very discretion attracts attention. Technological quality and aesthetic refinement come together in a product that confirms Italian excellence in creating the ideal synergy between form and function. The originality and high level of the design project are amply confirmed by the ease of use and intuitive nature of the graphic interface. White and coloured LEDs make it possible to personalise the environment and keep a constant check on the various functions, which are all activated in perfectly coordinated automation.

ITALIAN STYLING AND DESIGN.

A TOUCH TO OPEN
A WORLD OF FUNCTIONS.

Comelit

Mini-Touch is the new exclusive result of Comelit's commitment to research, which resulted in the evolution of the very concept of domotics into 'Home Automation'. Comelit offers systems that simplify the intelligent management of all the technological resources and automations present in the home. Small in size, futuristic in styling, and big on performance, Mini-Touch is the supervisor that exceeds expectations: domotic technology becomes easy, straightforward and intuitive to use, elegant in its ability to blend harmoniously with all types of interior decor.

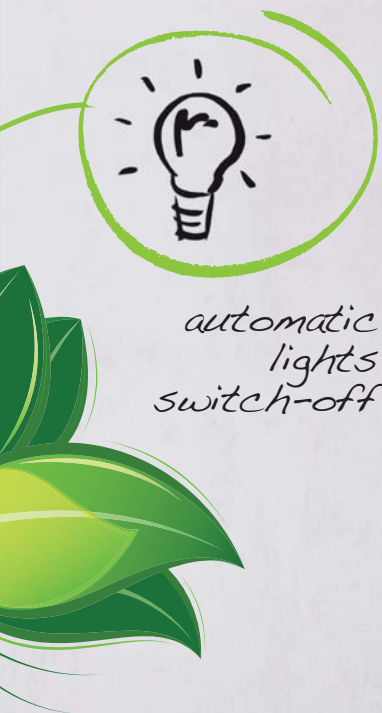

Selective temperature control

programmed adjustment of individual appliances

Optimizing power consumption, saving energy and eco sustainability are all synergic factors. Home automation is today considered just as important as the adoption of solutions based on the use of renewable energy sources. The capabilities of the advanced Mini-Touch supervisor, which provides integrated management of home systems and auto-adjusts whenever necessary, allow access to selective temperature control, automatic switch-off of lights, more rational management of hot water, and programmed and selective adjustment of individual appliances, all of which result in a significant reduction of energy consumption of up to one third of the normal home utility bill.

ECO SUSTAINABILITY AND SAVING ON BILLS

*automatic

*up to
30%
saving of
consumption*

IN LINE WITH EUROPEAN DIRECTIVES.

The European Directive on the energy performance of buildings (Directive 2010/31/EU), awards domotics a central role in the improvement of energy efficiency.

It also promotes a culture of energy saving (for example with regard to air conditioning systems), promoting sensitisation of users.

MANAGES ALL FUNCTIONS
FOR HOME COMFORT AND
SECURITY INDEPENDENTLY.

Mini-Touch allows simple supervision and management of all home systems and devices: from the heating to the alarm system. Mini-Touch eliminates the need for multiple devices located in different parts of the home. A single compact and elegant supervisor makes it possible to monitor technological systems and program their operation. In addition, thanks to distributed intelligence the numerous systems and devices all remain active and operational because they are not dependent on a single central unit.

EVERYTHING YOU NEED WITH A SIMPLE GESTURE.

Activation of scenarios is possible also by swiping the special key over the Mini-Touch proximity reader. The key is available in a variety of colours, each corresponding to different programs, all of which can be personalized. Alarm, climate, automations, lights... Mini-Touch recognises the key's owner and activates the requested functions.

85 mm

123 mm

The DNA of the Mini-Touch project incorporates the genetic code of interior architecture and the creative trends of modern design. Conceived and constructed to control technology, the instrument is also a stunning decor accessory with its own very specific creative identity. The functional aesthetics of the device can be enhanced by the diffusion of coloured light, which ensures pleasing integration in the style and colour scheme of the room in which it is installed.

TOUCH SCREEN DISPLAY
Assures fingertip control of the supervisor.

SPECIAL ANTI SCRATCH PROTECTIVE FILM
The product is supplied encased in strong protective film.

COMPLETE DARK
The outer case of Mini-Touch is all-back and made of hi-tech material that enhances the good looks of the supervisor even when it is powered off.

BUILT-IN PROXIMITY READER
For immediate recognition of the code of Comelit proximity keys.

BUILT-IN TEMPERATURE SENSOR
For precise room temperature readings.

**MORE THAN
JUST DESIGN:
PURE CREATIVITY.**

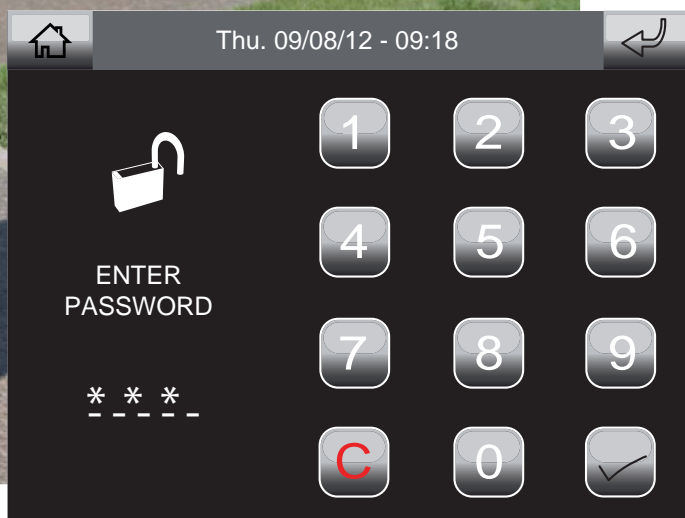

MAGIC LIGHT INDICATOR

The numerous functions of Mini-Touch are expanded by an original and practical LEDs system. When the alarm, cooling or heating functions are activated, the display projects a light beam onto the wall to signal the event. You know exactly what's happening with just a glance.

In stand-by mode the colour of the display can be selected to match the taste or personal preference of the user. The light emission is always attractive, discrete and never invasive, while simultaneously providing an additional light source in the room.

GO AWAY FOR THAT
WELL-DESERVED BREAK
IN COMPLETE TRANQUILLITY.

ALARM

A RELAXED FAMILY ATMOSPHERE STARTS
WITH A WELL PROTECTED HOME.

Mini-Touch is the ideal supervisor to control the home burglar alarm system. The extreme simplicity of programming and the clarity when checking when and where the alarm is activated combine to assure the maximum tranquillity in the home. Each function can be checked and managed also from a remote location via smartphone or PC.

ALL THE WARMTH
OF THE HOME.

CLIMATE

EXACTLY THE RIGHT ATMOSPHERE
IN EACH ROOM.

Mini-Touch's graphic interface makes it possible to view the entire daily profile of the heating and air conditioning system on a single screen simply and intuitively. The supervisor is always connected to the sensors in the various rooms, communicating the different climatic conditions and making it possible to program climate control technologies selectively. All this translates into consistent savings on utility bills.

THE SMARTEST
WAY OF SAVING
ENERGY.

LIGHTING

REDUCE WASTAGE,
INCREASE EFFICIENCY.

Coordinated and intelligent management of the entire home lighting system, which also uses a dedicated 'presence detection' function, makes it possible to reduce wastage and obtain significant savings in cash, time and preoccupation: each light is constantly monitored, with easily programmable on and off times, in addition to eliminating the need to check room by room to ensure lights are off.

MONITORING AND PERFECT MANAGEMENT OF HOME APPLIANCES

CONSUMPTION MANAGEMENT

PREVENT POWER OUTAGES,
PROTECT DEVICES.

Mini-Touch monitors the power consumption of your home appliances. If a possible mains supply overload is detected the appliances are automatically set to stand-by in the programmed sequence.

SAFETY FOR
THE KIDS AND
GROWN-UPS.

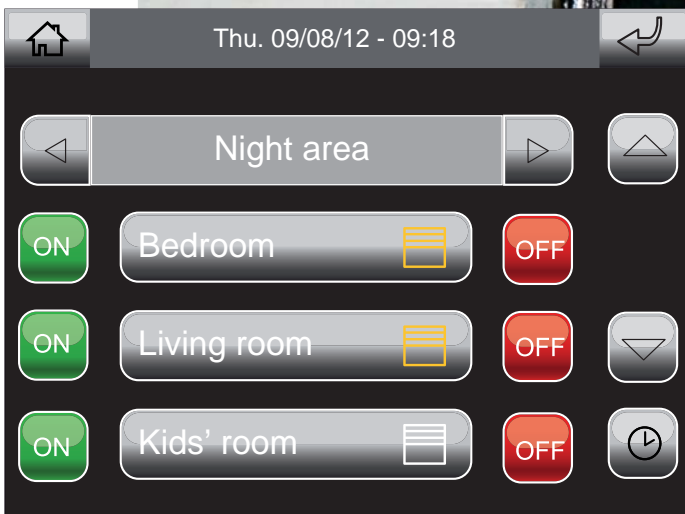

LOADS MANAGEMENT

POWER, WHERE, HOW AND
WHEN IT'S NEEDED.

Mini-Touch provides a real guarantee of safety in relation to electric shock hazards and unplanned power dispersal. Mini-Touch makes it possible to switch off the power circuits in different areas of the home, with the preferred methods and times, such as in the kids' room during play periods or in bedrooms at night.

TRANQUILLITY
ALSO WHEN
IT RAINS.

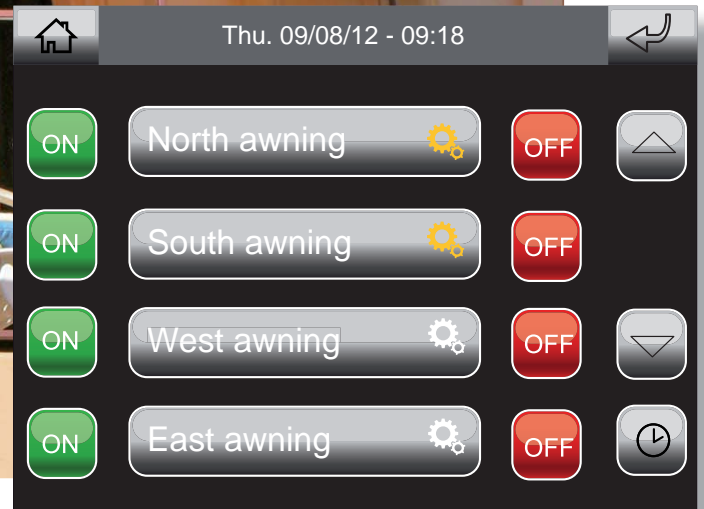

SHUTTERS

THE SHUTTERS MOVE IN PACE WITH
THE RHYTHM OF FAMILY LIFE.

With Mini Touch it's easy to control opening and closing of shutters automatically in harmony with the family's preferences, individual requirements, times of the day and weather conditions. The device features a self-override facility that trips in the case of rain: the sensors detect the wet conditions and close the shutters before the programmed time.

SWELTERING
HEAT AND
THUNDERSTORMS?
NO PROBLEM.

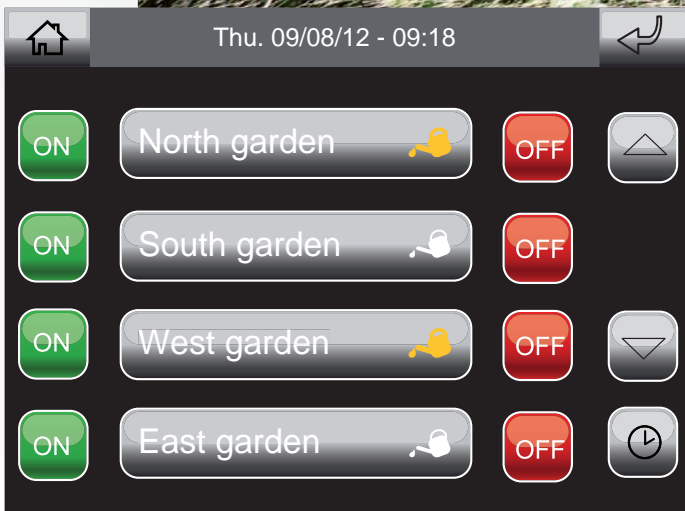

AUTOMATIONS

CONTROLLING THE SUN: NOW THAT'S CONVENIENCE.

Sun awnings offer essential protection for the home and its occupants during the summer months, but they can be tricky to look after. Mini-Touch has the solution: it unfurls the awnings at programmed times and simultaneously detects the presence of inclement weather conditions such as high wind or thunderstorms, closing the awnings to avoid damage.

KEEP THE GARDEN
ALWAYS LOOKING
AT ITS BEST.

IRRIGATION

YOUR PERSONAL GARDENER
AT YOUR BECK AND CALL.

With its electronic intelligence Mini-Touch activates the automatic watering system at preset times and recognises when programmed functions should be overridden, for example by inhibiting the system on rainy days. This means real cost savings while also helping protect the environment.

COMELIT NEVER LETS YOU DOWN

Comelit offers a network of services and opportunities that confirm its status as the ideal partner of installers and customers seeking 100% quality in the world of home automation. Comelit's commitment starts by examining the demands of professionals and the market and translates into technological innovation applied to projects and the maximum reliability of the company's products.

UTC

Professional technical assistance over the phone to solve all types of problems.

SATCO

ON THE SPOT TECHNICAL ASSISTANCE

Comelit makes use of specialised professionals located throughout the country to provide expert assistance directly where it's needed.

ENGINEERING

An operative division entirely dedicated to providing customers with ideal solutions for non-standard system requirements. This division develops turnkey projects, primarily for large residential, business and industrial complexes.

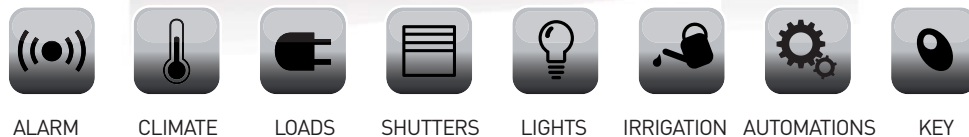

WEB

Comelit's website offers a great resource for consultation, with access to a comprehensive range of technical and commercial information for installers. A point of reference active 24/7 and 365 days a year to provide practical answers, request assistance, receive consultancy services and more besides.

ART. 20034607

3.5" MINI TOUCH SUPERVISOR VERSION

3.5" Mini Touch with supervisor function, to connect to the SimpleHome bus for management of the automation system to control the lights, loads, shutters, climate, scenarios, irrigation and to the SimpleSafe system to display and control the anti-intrusion system. Built-in temperature sensor, 1 switching relay output, 3 transistor outputs to control a 3-speed fan-coil. Built-in RFID reader for activation of scenarios using transponder art. SK9050. Variable backlighting on the basis of the status of the climate areas of the system, the status of the anti-intrusion system or with an adjustable colour steplights function. Can be fitted in a standard 3 module wall box (art. 4517) - not included.

ART. 20003001

3.5" MINI TOUCH PROGRAMMABLE THERMOSTAT VERSION

3.5" Mini Touch with programmable thermostat function, to connect to the SimpleHome bus. Built-in temperature sensor, one switching relay output for direct control of the boiler or solenoid valve, 3 transistor outputs to control a 3-speed fan-coil. Yellow backlighting in compliance with the status of the thermostat or with an adjustable colour steplights function. Can be fitted in a standard 3 module wall box (art. 4517) - not included.
