

GDX7 PLE Video Handset

Bringing security and peace of mind to its users is the GDX7 PLE video handset with a 4.3" colour TFT screen. The integral screen provides a means of live-streamed video communication of the visitor wishing to gain access. The housing is made from white ABS plastic and is connected to the GDX7 PLE line card by a single 0.75mm 2-Core cable. The handset is connected by a white curly cord and 2x RJ11 connections. It is used to remotely open the secured door to welcome visitors, once the call has been answered.

Designed for flexibility and convenience, the GDX7 video handset comes with a number of features which can be easily personalised to suit the different preferences of each tenant. The handset provides a privacy mode to prevent nuisance calls or unwanted contact attempts. This can be conveniently enabled by pressing the privacy button. Each button has a raised tactile image of an icon depicting its use and is illuminated when in operation. Further customisations include the resident being able to adjust the volume of the ringtone as well as change the contrast and colour of the screen.

The handset is suitable for hard of hearing or visually impaired residents as it comes with illuminated buttons and raised tactile icons. This functionality allows the residents to handle calls more easily and is Equality Act (DDA) compliant.

Features of the Video Handset:

- Each handset is addressable with a unique name
- 4.3" colour TFT screen for video communication
- Privacy button to prevent unwanted calls - time set by engineer at time of installation
-  Button to remotely unlock the controlled entrance door
-  Door alarm indication - this indicates if the controlled door has been left open
- Ringer volume, brightness and colour control
- Cable entry points at the top and bottom of the handset
