## GIOTTO SERIES

Surface-wall mounted monitor with handset,  
colour or black and white screen

# GIOTTO SERIES

Surface-wall mounted monitor with handset, colour or black and white screen

## Absolute versatility

The Giotto 6300 series is a range of door entry monitors created by combining the audio and video sections into a single product. The available versions differ in terms of the type of system. All monitors are surface wall-mounting and include a low-profile B/W or colour screen and handset. They feature 3-level call volume adjustment and call mute indicated by a red LED. The green LED indicates that the door is open when connected to a suitable lock or door. Supplied with fixing bracket with connection terminal block and three push-buttons, one for the door lock and two for additional functions (e.g. self-start, stair light, second lock etc.) Desktop installation requires use of the conversion kit.

Monitors with Sound System technology, and for 2-Wire Video Kits, are suitable for use with hearing aids worn by the hard of hearing.

**Digibus type 6344**  
Monitor with 3.5" B/W screen,  
Digibus technology
