Chapter 1 - Product Overview

I. Performance Features

1. Dome Address from 1 - 255
2. Multiple protocols and auto protocol negotiation
3. Pan 360°continuous rotation
4. Tilt 90°action plus 2°angle adjustment
5. Pan manual operation speed ranging from 0.1°to 300°/S
6. Tilt manual operation speed ranging from 0.1°to 120°/S
7. 255 Preset positions
8. The maximum Preset running speed, when called, can reach 400°/S with an accuracy of $\pm 0.1^\circ$
9. Power supply AC24V, 2A
10. Easy installation interface
11. IP66 environmental protection
12. RS-485 transmission
13. Transmission speed, baud rate selectable

II. Functions

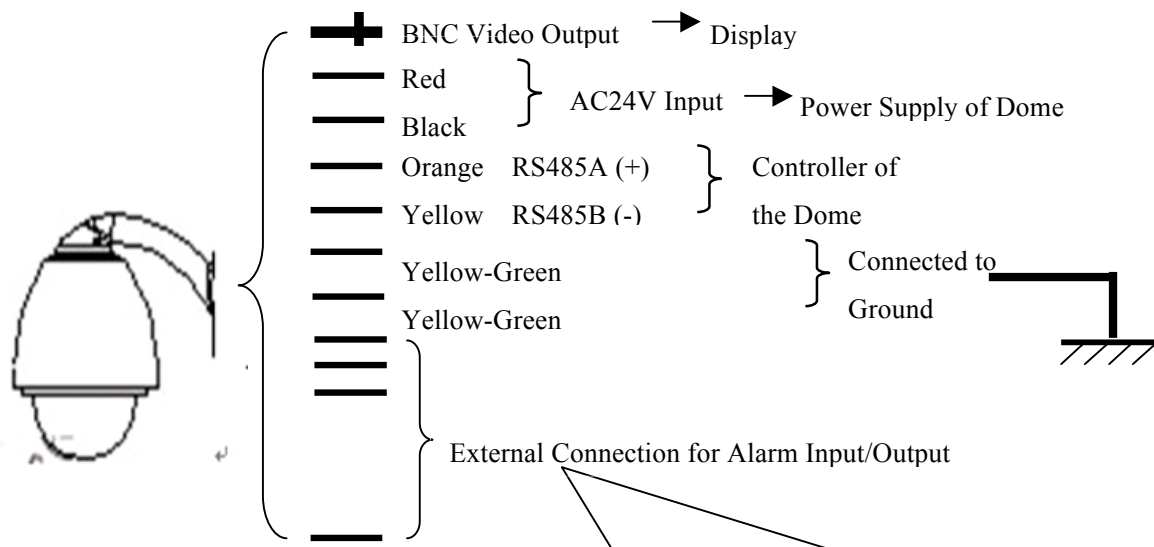

1. Multi-language OSD menu and display
2. Display for camera name, operating position and angle
3. Crosshair operating function
4. Six Tour operations with 2 minutes recording per Tour
5. Eight groups of programmable vector scans
6. Vertical auto flip with 10°automatic forward tracing
7. Eight programmable sectional mask zones
8. Eight programmable sectional display sectors
9. The dome returns to run mode after self-test, or no communication received
10. Image frame freeze
11. Operation resume function
12. Intelligent manual scan function
13. Intelligent power off. Data held in real time memory and resumes operation on power on
14. Highly efficient 3-dimensional scan
15. Proportional zoom
16. User management and operation authorisation
17. Time & Date Display
18. Assignment programming
19. Timer for startup and shutdown
20. Alarm and warning mechanism
21. Real-time operating temperature display
22. Temperature alarm and high temperature shutdown

Chapter 2 - Wiring and Setup of Dome System

I. Wiring the Dome

1. Basic System Connection

The basic system connections are shown below. When using this product for the first time, please read and carefully follow this electrical wiring schematic as incorrect wiring may lead to permanent damage of the dome or damage of other attached equipment.

Description for Alarm Function:

No.1 Alarm Input: Red and White

No.2 Alarm Input: Yellow and White

No.3 Alarm Input: Grey and White

No.4 Alarm Input: Orange and White

No.5 Alarm Input: Brown

No.6 Alarm Input: Green and White

No.7 Alarm Input: Brown and White

No.8 Alarm Input: Blue and White

No.8 Alarm Input: Grey and White

Alarm Input Public Terminal (COM1): Black/White

No.1 Alarm Constant ON Output (NO1): Blue and Green

No.1 Alarm Output Public Terminal (COM1): Blue

No.2 Alarm Constant ON Output (NC2): Brown and Green

No.2 Alarm Output Public Terminal (COM2): Green

The brown stranded wire with alarm input wire is the alarm system ground

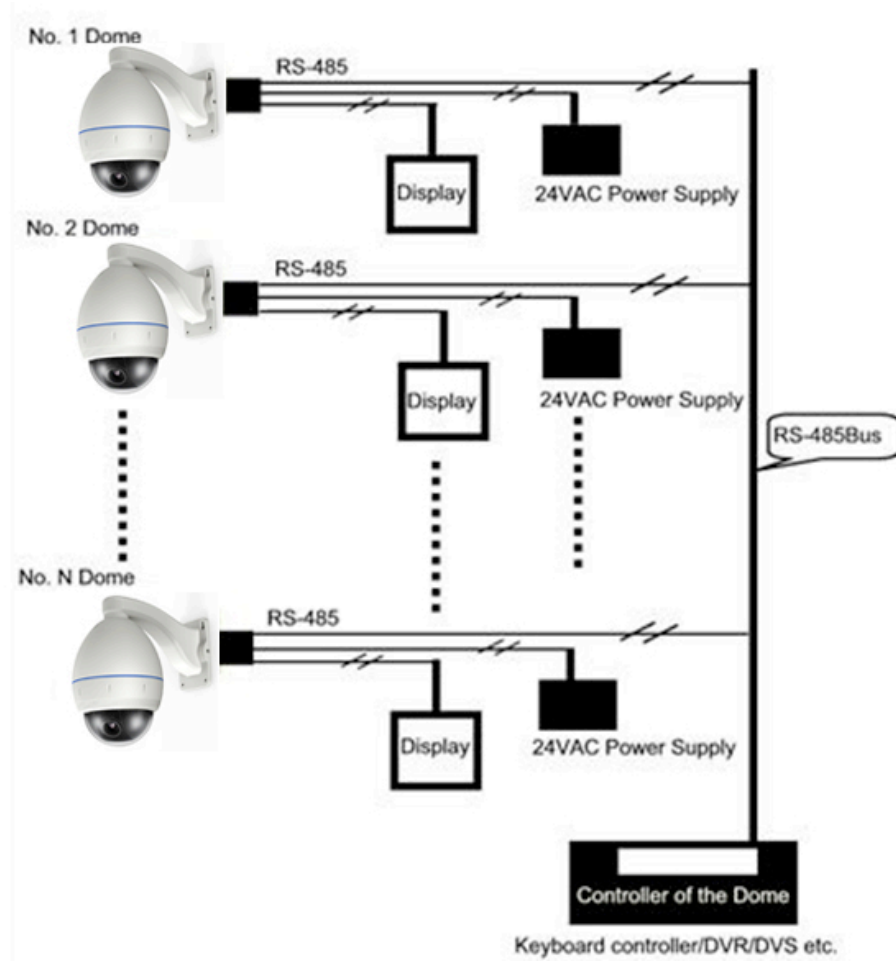

2. Multi Dome Connection

When connecting multiple domes together you can embed them in a multi-device system with auxiliary connection to devices, such as surge protectors, video matrixes, DVR's and alarm boxes.

AC24V: Power supply for the dome, which converts 220V/50Hz input to an AC24V output.

RS-485 Bus: Is for the control signal (RS-485 signal) output of a controller - connected to the communication input terminals of the control cable of each dome.

Video: Is for image signal output of each dome (can be directly output to video equipment, such as a monitor, DVR or video matrix).

II. Setting the Device Communications

Before installation and use, the settings for the communication protocol and transmission speed (baud rate) should match those used by the control system.

1. Setting the dome's protocol and baud rate.

On/Off	1 st digit	2 nd digit	3 rd digit	4 th digit	5 th digit	6 th digit
Protocol						
PELCO-D	ON	ON	OFF	OFF	**	**
PELCO-P	OFF	ON	OFF	OFF	**	**
DYNACOLOR	ON	OFF	OFF	OFF	**	**
ULTRACK	OFF	OFF	ON	OFF		
VICON	OFF	OFF	OFF	OFF	**	**

Note: The protocol and baud rate of dome should match with those

used by the controller. The dome needs to be restarted after revision.

On/Off	5 th digit	6 th digit
Baud Rate		
2400	OFF	OFF
4800	OFF	ON
9600	ON	OFF
19200	ON	ON

2. Address setting of dome device

Address setting address for dome (this figure shows the dome address of dome as 1)

Dome device range: 1~255

Setting method: The sum of switch numbers when they are in the ON position is the address of the dome.

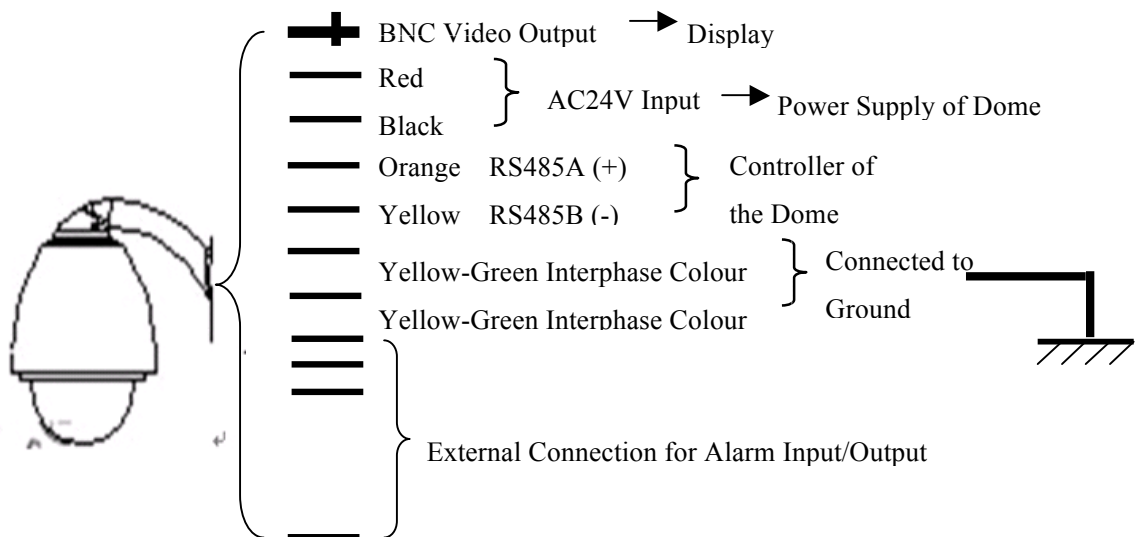

2 4 16

Calculation example of a dome address:
(2+4+16=22) the address is 22.

Chapter 3 - Quick Operating Guide

I. Wiring

II. Setting Protocol and Baud Rate

Turn the power Off when setting, and restart the dome after revision

The figure shows: Protocol: **PELCO-D**
Baud rate: **2400 bps**

The figure shows: Auto detection protocol.
Baud rate: **2400bps**

(Refer to detailed parameters in the next chapter)

III. Setting Dome Address

The figure shows: A Dome Address of 1

(Refer to detailed parameters in the next chapter)

This dip switch is located on the PCB in the dome

IV. Install Camera

- Note:**
1. Do not connect the camera and dome with FFC in an incorrect manner.
 2. The installation fixing holes of for different camera may differ.

V. Connect the Dome Power

When power is applied to the Dome the product enters a self-test routine which outputs the video image to an attached monitor.

Note: When the dome is self-testing it is normal to hear sounds made by the Dome's pan and tilt motors.

VI. Controller

Set the communication protocol, baud rate and address of the keyboard controller. These must be identical to those used for the Dome. Please refer to the Keyboard Controller instruction manual.

Note: If the protocol for the Dome is set to auto detection, the protocol for the Keyboard Controller can be set arbitrarily, but the baud rate must be set identical with that of the Dome.

VII. Start Testing

When the above are complete, the Dome testing can be started.

1. Direction Control Test

The up, down, left and right directions of the Dome can be controlled by using the Keyboard Controller, as indicated above.

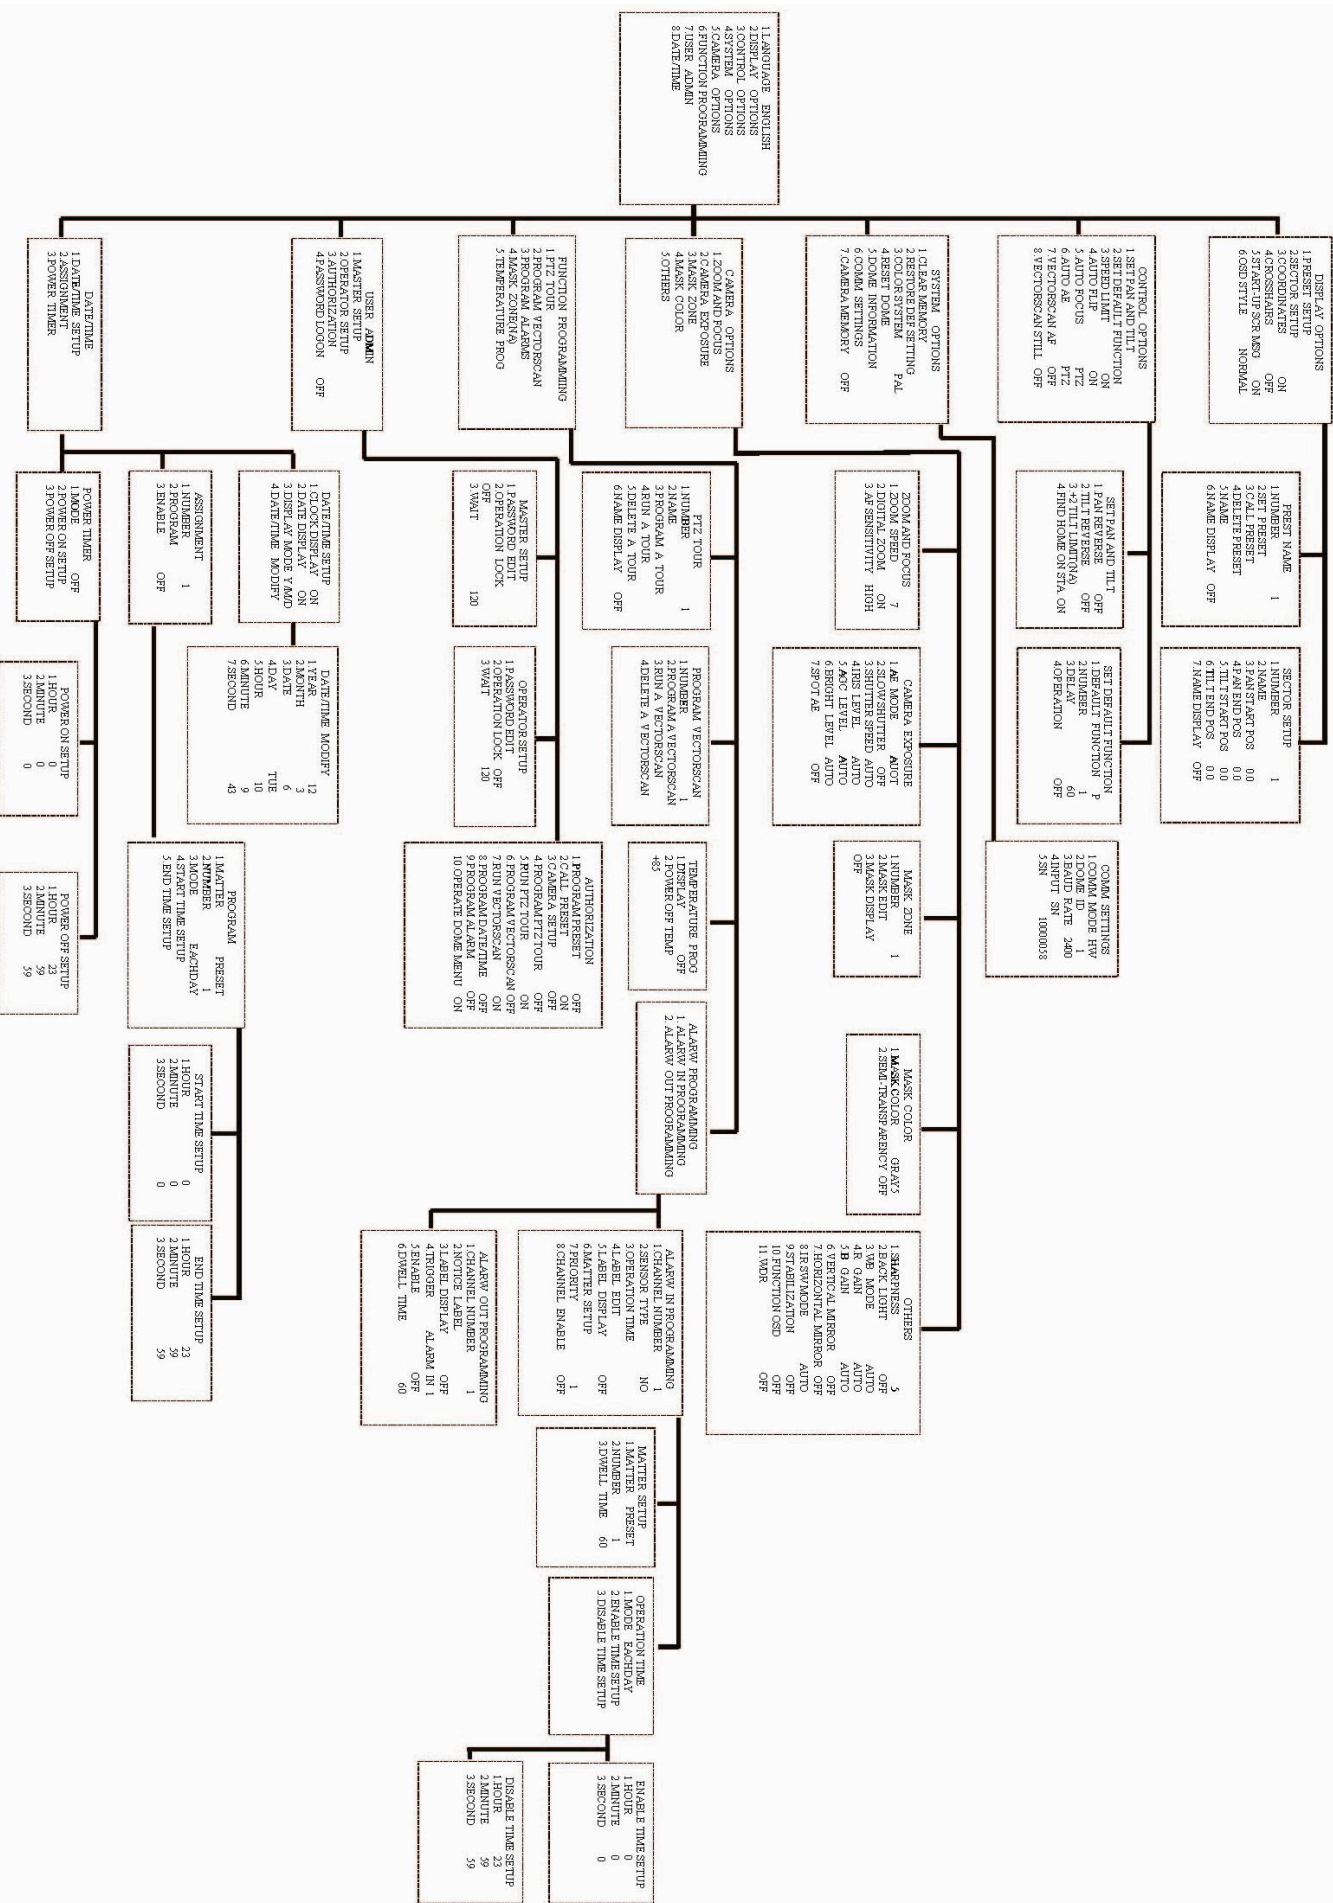

2. Zoom Control Test

The Camera Zoom can be controlled using the Joystick zoom function, or by the TELE (Zoom in) and WIDE (Zoom out) keyboard buttons.

VIII. Complete the Test

1. If the test performance is normal it indicates the system is operating normally. Please do not make any changes to the wiring and or settings. To do so may cause faults and/or unnecessary damage and loss.
2. If the test performance is abnormal, or only one test is performing normally, please check the wiring (items 1 and IV) and the settings (item II, III and VI).

Chapter 4 – Operation Menu

I. Operating Instructions

<1>. Menu Operation Instructions

1. Input a Tilt movement command for cursor movement and option selection, namely the controller moves the Joystick up and down; hereinafter called **Joystick Up/Down**
2. Input a Pan movement command for entering into an option or for changing a setting value, namely the controller moves the Joystick left and right; hereinafter called **Joystick Left/Right**
3. Input an Iris Open command for confirming setup or for changing value(s), namely the controller initiates an IRIS OPEN command; hereinafter called **Press IRIS OPEN**
4. Input an Iris Close command to cancel a setting or to Exit, namely the controller initiates an IRIS CLOSE command; hereinafter called **Press IRIS CLOSE**

<2>. To Input a Numeric Value

1. Move the Joystick Left/Right for the cursor to select the numeric value to be entered.
2. Press **IRIS OPEN** to confirm, and the number selected is displayed; as indicated in the pictures below.
3. Move the Joystick Left/Right to select the next number to be entered.
4. Press **IRIS OPEN** to confirm, the selected number is displayed in the corresponding data bit.
5. Press **IRIS CLOSE** to confirm and exit when complete.

<3>. To Input a Character

1. Move the Joystick Left/Right for the cursor to select the character to be entered.
2. Press **IRIS OPEN** to confirm, and the character selected is displayed; as indicated in the pictures below.
3. Move the Joystick Left/Right to select the next character to be entered.
4. Press **IRIS OPEN** to confirm, the character is displayed in the corresponding data bit.
5. Input other characters, as required by repeating the above procedure.
6. Press **IRIS CLOSE** to save and exit when complete.

<4>. Logon

1. Invoke Preset 92 preset for the Administrator logon.

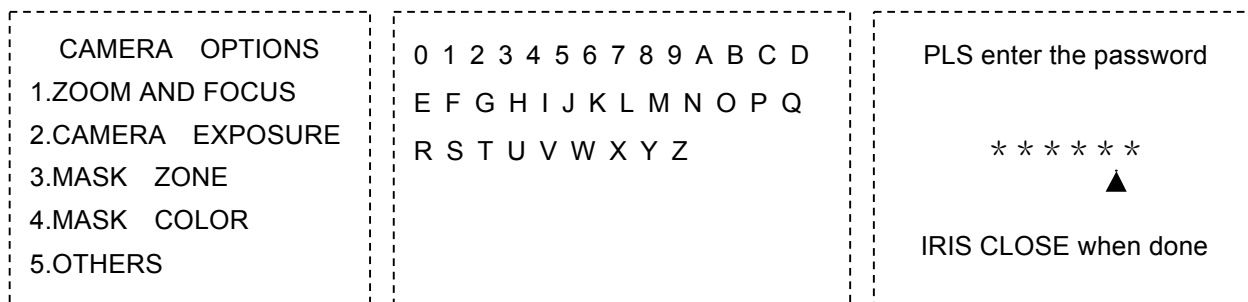

Invoke Preset 93 preset for the Operator logon.

Factory Set Password: Administrator: 000000 Operator: 111111

Note: The Administrator password should be changed and be kept secure.

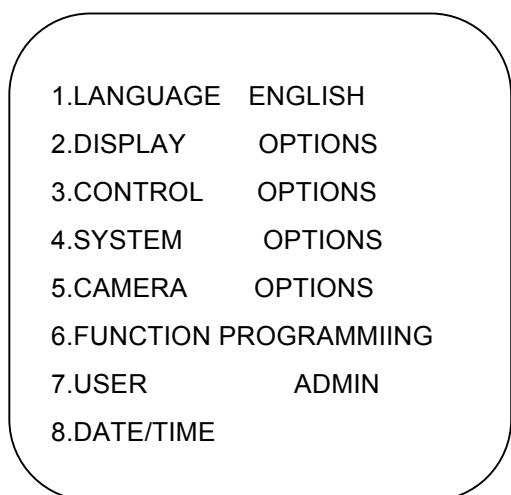

2. Move the cursor after entering the *Please enter the Password* interface. Select the bit to be entered. Then press **IRIS OPEN** to enter the alphanumeric and press **IRIS OPEN** to confirm. Input the correct 6 digit passwords as shown above.

After the input is complete, press **IRIS CLOSE**. *Error* will be prompted on screen if the input is wrong. The screen goes directly into the window to be operated if the input is correct.

II. Menu Tree List

<1> Main Menu. Press 90+PRE to enter the Main Menu.

<2> All sub-menus can be seen in this tree list

1.Language Options (English/Espanol/PolSKI)

<<Language Options

Jovstick Left/Right to select

2.Display Options

<<Display Options

Press IRIS OPEN or Jovstick Left/Right to enter

2.1.Preset Setup

<<Preset Setup Options

① Number 1

<<Preset Number Selection

Press IRIS OPEN or Jovstick Left/Right to enter

<<The default number after entering is 001 (hundred bit/ten bit/single bit). Joystick Left/Right to select the Preset position and press **IRIS OPEN** to confirm. Joystick Left/Right again to select numbers (0~~9). Press **IRIS OPEN** to confirm the selection. Press **IRIS CLOSE** to exit to the upper level menu when programming is complete.

② Set Preset

<<Set Preset

Press IRIS OPEN or Jovstick Left/Right to enter

Move the cursor to select the Preset position. Press **IRIS CLOSE** to finalise your selection. The screen displays **STORED** and returns to the previous menu.

③ Call Preset

<<Call Preset

Press IRIS OPEN or Jovstick Left/Right to enter

Select the number to be called. Joystick Up/Down to select the Call Preset Menu. Joystick Left/Right or press **IRIS OPEN** and the camera moves to corresponding Preset number.

④ Delete Preset

<<Delete Preset

Press IRIS OPEN or Joystick Left/Right to enter

Select the number needed to be deleted from the number options. Move the cursor to Delete Preset.

Joystick Left/Right or press IRIS OPEN to enter into the Delete Preset menu. Press IRIS OPEN to confirm the selection or IRIS CLOSE to cancel the selection and exit.

Are you sure to do this?
IRIS OPEN to confirm
IRIS CLOSE to cancel

<<Reminder: Are you sure you want to delete the Preset?

Press IRIS OPEN to confirm

Press IRIS CLOSE to exit to the upper level menu.

⑤ Name

<<Edit the Preset Name

Press IRIS OPEN or Joystick Left/Right to enter

7.3. Alarm Program

<< Alarm Programming

Press IRIS OPEN or Joystick Left/Right to enter

Functional Description: The Dome has a total of 8 alarm input channels and 2 alarm output channels, with a flexible programming structure.

① Alarm In Programming

Press IRIS OPEN or Joystick Left/Right to enter

A) Channel Number 1

<<Channel number (1~8)

Joystick Left/Right to select

B) Sensor Type NO

<< Sensor Type NO/NC

Joystick Left/Right to select

C) Operation Time

<< Operation Time

Press IRIS OPEN or Joystick Left/Right to enter

a) Mode Eachday

<< Mode

Joystick Left/Right to select

Eachday / Workday / Weekend / Mon / Tue / Wed / Thurs / Fri/Sat / Sun

b) Enable Time Setup

<< Enable Time Setup

Press IRIS OPEN or Joystick Left/Right to enter

Default Time: 00:00:00 Refer to *Numeric Input Steps Instructions* for details.

Enable Time Setup	
▶ 1 Hour	0
2 Minute	0
3 Second	0
IRIS CLOSE to exit	

Disable Time Setup	
▶ 1 Hour	23
2 Minute	59
3 Second	59
IRIS CLOSE to exit	

c) Disable Time Setup

<< Disable Time Setup

Press IRIS OPEN or Joystick Left/Right to enter

Default time: 23:59:59 Refer to *Numeric Input Steps Instructions* for details.

Press IRIS CLOSE to EXIT

D) Label Edit _____

<< Edit Label

Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Character Input Steps Instructions* for details

E) Label Display OFF

<< Label Display ON/OFF Joystick Left/Right to select

F) Properties Setup

<< Properties Setup Press IRIS OPEN or Joystick Left/Right to enter

a) Property Preset

<< Property Joystick Left/Right to select

Preset / Vector / Tour / PanScan / DayNight / PicStill

b) Number 1

<< Number (Default:1) Joystick Left/Right to select

Refer to *Numeric Input Steps Instructions* for details.

Note: Effective only for Preset / Vector Scan / PTZ Tour

c) Dwell Time 60

<<Dwell time Default: 60 Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Numeric Input Steps Instructions* for details.

Press IRIS CLOSE to EXIT

G) Priority 1

<< Priority (1~8) Joystick Left/Right to select

H) Channel Enable OFF

<< Channel Enable ON/OFF Joystick Left/Right to select

※ If set to ON, the dome will take the actions corresponding to the user settings of this channel when an alarm situation occurs.

※ If set to OFF, this channel will make no response no matter if there's an alarm situation or not.

Note:

※ Alarm has the top priority from all the non-functional setting status'.

(Including manual and automatically executed cruising or scanning functions)

※ User who have the operation authority can disable the alarm.

Situation 1. If an alarm occurs when user is manually scanning, the manual scan is stopped for the alarm execution. It enters the next alarmround only when the alarm is disabled.

Situation 2. It disables the alarm during non-operation time.

Situation 3. When alarm inputs of the same level of priority occur, the lowest numbered channel is executed first.

Press IRIS CLOSE to EXIT

② Alarm Out Programming

Press IRIS OPEN or Joystick Left/Right to enter

A) Channel Number 1

<< Channel Number (1~2) Joystick Left/Right to select

B) Edit Label ———

<< Label Edit

Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Character Input Steps Instructions* for details

C) Label Display OFF

<< Label Display ON/OFF

Joystick Left/Right to select

7.5. Temperature Programming

Press IRIS OPEN or Joystick Left/Right to enter

① << Display ON/OFF

Joystick Left/Right to select

② << Power Off Temperature

Press IRIS OPEN or Joystick Left/Right to enter

Press IRIS OPEN continuously to choose “+” or “-”

Refer to *Numeric Input Steps Instructions* for details

Press IRIS CLOSE to exit

7.6. << Mask Setting

Reserved

8. User Management

Press IRIS OPEN or Joystick Left/Right to enter

Note: This authority only belongs to the Administrator.

8.1 Master Setup

<<Master Setup

Press IRIS OPEN or Joystick Left/Right to enter

- ① <<Edit Password
- Press IRIS OPEN or Joystick Left/Right to enter
- Refer to *Numeric Input Steps Instructions* to set a new password. If the setup is correct, the screen displays the message *Done!*. Otherwise, the message *Error!* is displayed.

- ② << Operation Lock ON/OFF
- Joystick Left/Right to select
- ③ << Wait
- Press IRIS OPEN or Joystick Left/Right to enter
- Refer to *Numeric Input Steps Instructions* to set up time.

Note: a) If the operation Lock function is enabled and no control command is received within the specified waiting time, the dome will lock up the operation until a successful re-login.
b) Operational Lock of all-level users is only effective to its own level.

Press IRIS CLOSE to EXIT

8.2 Operator Setup

<<Operator Setup

Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Master Setup* section for details.

8.3 Authorisation

<<Authorisation

Press IRIS OPEN or Joystick Left/Right to enter

Note: This option is for the configuring of general users’ operating authorities by the administrator. If any functions are set as ON, it indicates the function is open to general users. Otherwise the screen shows “No Authorisation”

- ① Program Preset OFF << Program Preset ON/OFF
- Joystick Left/Right to select

Date: 1~(28/29/30/31)

Day: Mon/Tue/Wed/Thurs/Fri/Sat/Sun

Hour: 0~23

Minute: 0~59

Second: 0~59

Press IRIS CLOSE to EXIT

9.2 Assignment

<< Assignment

Press IRIS OPEN or Joystick Left/Right to enter

Note: You can perform 8 Assignment options, to be executed automatically for the dome system. Namely, to execute the dome or camera functions automatically at the programmed designated time.

If an executing task is terminated by manual operation, it restarts if a manual operation is not performed within 10 seconds after stopping.

① << Number 1~8

Joystick Left/Right to select

Note: Assignment Priority: 1-8 (High-Low)

② << Program

Press IRIS OPEN or Joystick Left/Right to enter

A) << Property Preset/Vector/Tour/PanScan/DayNight Joystick Left/Right to select

B) << Number

Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Numeric Input Steps Instructions* to set number

Note: Number is invalid for the PanScan and DayNight optional functions. It's used to select certain specific preset points and the track when the Preset/Vector/Tour is being selected by a specific assignment.

C) << Mode Eachday

Joystick Left/Right to select

Eachday / Workday / Weekend / Mon / Tue / Wed / Thurs / Fri / Sat / Sun

D) << Start Time Setup

Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Numeric Input Steps Instructions* to set start time

Start Time Setup	
1 Hour	0
2 Minutes	0
3 Seconds	0

End Time Setup	
1 Hour	23
2 Minute	59
3 Second	59

E) << End time Setup

Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Numeric Input Steps Instructions* to set end time

Note: If the execution time for the assignment from start to end is less than 3 seconds, this task will always be executed.

Press IRIS CLOSE to EXIT

③ << Enable ON/OFF

Joystick Left/Right to select

Note: If set to ON, the assignment is executed at the designated time. Otherwise, this assignment is not executed, but all data is stored.

Press IRIS CLOSE to EXIT

9.3 Power Timer

<< Power Timer Setup

Press IRIS OPEN or Joystick Left/Right to enter

- Note:**
- A. You can perform a timed startup and shutdown for the dome.
 - B. The interval period between startup and shutdown time is the System Startup Operating Status.
While the shutdown time to startup time is the System Shutdown Status.
 - C. Make sure that startup time is earlier than shutdown time, otherwise the system will remain in the System Shutdown status.
 - D. The system will wake for startup once a control command is received. If no control command is received within 60 seconds (in non-menu status), it re-enters shutdown status.
 - E. The priority of Assignment is higher than that of the Power Timer. Namely, assignment will be executed first no matter it is under startup or shutdown status, and the Power Timer can only be entered after the execution of Assignment has been completed, while other non-Assignment functional operations or executions will be automatically discontinued before Power Timer is executed.

① << Mode Off

Joystick Left/Right to select

Off / Eachday / Workday / Weekend / Mon / Tue / Wed / Thurs / Fri / Sat / Sun

② << Power On Setup

Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Numeric Input Steps Instructions* to set power on time.

Power On Setup	
▶ 1 Hour	0
2 Minute	0
3 Second	0
IRIS CLOSE to exit	

Power Off Setup	
▶ 1 Hour	23
2 Minute	59
3 Second	59
IRIS CLOSE to exit	

③ << Power Off Setup

Press IRIS OPEN or Joystick Left/Right to enter

Refer to *Numeric Input Steps Instructions* to set power off time.

Press IRIS CLOSE to exit

Chapter 5 Shortcut Operation Table

1. System Preset Operation Table

System Preset Operation Table	
Preset 80 (Call 80)	Run PTZ Tour 1
Preset 81 (Call 81)	Run PTZ Tour 2
Preset 82 (Call 82)	Run PTZ Tour 3
Preset 83 (Call 83)	Start VectorScan 1
Preset 84 (Call 84)	Start VectorScan 2
Preset 85 (Call 85)	Start VectorScan 3
Preset 86 (Call 86)	Start VectorScan 4
Preset 87 (Call 87)	Start VectorScan 5
Preset 88 (Call 88)	Start VectorScan 6
Preset 89 (Call 89)	Joystick Freeze and Unfreeze Video
Preset 90/95 (Call 90/95)	Setup the Menus and Camera
Preset 91 (Call 91)	Invokes the Flashback Function
Preset 92 (Call 92)	Administrator Logon
Preset 93 (Call 93)	Operator Logon
Preset 94 (Call 94)	Restart Dome Power Supply (Set Preset 94 as the power supply for shutting down the dome)

Preset point setting: Method 1: First input "PRESET", and then input the number of the preset point. Press "ENTER" to complete (PRESET + No. + ENTER).
Method 2: First input the number of preset point. Then press "SHOT".
Press "ON" to complete (Preset No. + Shot + ON).

Call Preset point: Method 1: First input "CALL". Then Input the number of the preset point.
Press "ENTER" to complete (Call + Preset No. + ENTER).
Method 2: First input the number of preset point. Then press "SHOT".
Press "ACK" to complete (Preset No. + Shot + ACK).

Clear Preset point: Method 1: First input "PRESET". Then input the number of preset point.
Press "OFF" in the end (PRESET + Preset No. + OFF)
Method 2: First input the preset No. Then press "SHOT".
Press "OFF" to complete (Preset No. + SHOT + OFF).

2. User Logon Operation

Invoke Preset 92 for the Administrator logon.

Invoke Preset 93 for the Operator logon.

Factory Set Password: Administrator: 000000 Operator: 111111

Note: If the dome needs to be returned to the factory the Administrator password will be reset to default.

3. OSD Menu: Enter “90+PRE+Enter” to access the PTZ’s OSD Menu.

4. Description of the Tour Function:

- a) When entering “**PRESET+51+Enter**” the device enables the system default Tour. The device automatically scans, point by point, from Preset No 1 to Preset No.16. If any of the positions have not been preset or been cleared Tour does not scan them.
- b) Dwell time at each preset position is 2 seconds.

5. Description of the Swing Function:

- a) The Dome automatically Swings between two specified Preset positions.
- b) Users can set the start point with “**PRESET+52+Enter**” and the end point with “**PRESET+53+Enter**”.
- c) Swing speed set: The above sets a swing speed of three seconds, then “**CALL+51+Enter**” saves the Swing speed. Use “**CALL+52+Enter**” to enable the Swing.
- d) Dwell time of the swing at the “start” and “end point” is 2 seconds.

6. Intelligent Manually Pan Continuous Scan:

If you use the joystick to manually pan, for a minimum of 3 seconds, then press “**CALL+101+Enter**” the dome remembers the direction of the manual pan and automatically pans continuously 360-degrees in the same direction.

Chapter 6 Main Technical Parameters

Dome Address	1-255
Pan Rotate Range	360 degree continous rotation
Tilt Rotate Range	0-90 degrees continous rotation
Pan Manual Speed	0-300 degrees/second
Tilt Manual Speed	0-120 degrees/second
Call Preset Position	400 degrees/second
Accuracy	±0.1 degree
Preset Positions	255
Languages	English/Spanish etc.
Function Information Display	Dome Name, Preset Name, PTZ Name, Sector Name Camera Orientation, Alarm Note, Time / Temperature Display
Intelligent Magnification Scanning Speed Match	Manual scanning speed changes along with automatic regulation of change in magnification (by inverse ratio)
Automatic Flip	10-degree forward tracking after 180-degree automatic flip when the dome reaches vertical 90-degree point.
Intelligent 3D Curise	Adjustable speed; vertical track can be changed immediately
Vector Scan	8 groups
PTZ Tour	6 tours; each 120 seconds
Sector Operation Dispay	8 areas
Privacy Zones	8 zones (dependent on camera module)
Alarms	8 input channels and 2 output channels
Assignment Programming	8 options
User Account Management	Strong user management mechanism
Timed Startup / Shutdown	Random programming
Control Mode	RS-485 Bus
Communciation Baudrate	2400 / 4800 / 9600 / 19200bps
Power Supply	AC24V (+/-4V) @ 50Hz, 50W
